Methodology

Latino Decisions surveyed 807 Latino registered voters between October 30-Nov 7, 2019. Interviews were collected via landline, cell phone, and web. The online portion was conducted in a respondent self-administered format, and the survey and invitation was available to respondents in English or Spanish. The full data are weighted to match the Latino voter population in the most recent Census ACS data file for age, gender, education, nativity, ancestry, and voter registration status. A post-stratification raking algorithm was used to balance each category to the Census estimates. The survey carries a margin of error of +/- 3.45 percentage points.
